

FOR EDUCATION DEPARTMENTS AND SCHOOL PARTNERS

A more connected school day.

A school-branded platform bringing leadership, finance, people, teaching and families into one working environment. Proposed for review with South African schools, with local requirements confirmed together.

CONNECTED JOURNEYS TO REVIEW

Capability areas in the current build. Selected workflows are checked before pilot use.

01 Director & leadership

Open a school overview, inspect an item needing attention and follow it to the responsible team.

02 Finance

Review a fee account, invoice and payment record, then trace the balance and follow-up action.

03 HR & staff

Review a leave request, apply the assigned approval step and check the resulting staff record.

04 Administration

Follow an application, check required documents and prepare the learner and family handover.

05 Teaching & reports

Record an assessment, review results and prepare a report for the school's approval process.

06 Parent access

Open a linked child's available attendance, fee balance and school information; agree report-release requirements.

07 School conversations

Follow a staff or parent conversation in a shared school channel, with authorised access.

08 AI & insights

Explore a question or support signal. Staff review the evidence and remain responsible for decisions.

CURRENT DEMONSTRATION STATUS

Actual interface captures show fictional-school messaging, saved grades and history, a refreshed report draft and a leave approval. Invoice/payment records reconcile to a balance. Live AI, payment processing, ledger and receipt delivery remain unverified. School-specific acceptance is required before rollout.

Demonstrations use fictional accounts and records. No live learner data is required for this review.

PROPOSED FIRST STEP

One school. A measured pilot.

Proposed duration: one school term, negotiable. **Scope:** a small agreed user group and two or three workflows. Select a school and lead, confirm readiness, then agree the dates, responsibilities and written quote.

01 Confirm readiness

Check fictional records, role access and the selected workflows. Agree the curriculum and reporting requirements.

02 Record the baseline

Observe equivalent tasks: workload, completion time, rework and current participation. Agree success criteria.

03 Train and use

Prepare authorised data only after agreements are in place. Train the users and support the agreed workflows.

04 Review together

Compare results and support effort. Decide whether to continue, adjust, expand or close the pilot.

MEASURES TO AGREE BEFORE THE PILOT

Admin & reporting	Minutes per completed task; errors and rework.
Family communication	Participation and office follow-up; include access barriers.
Finance follow-up	Time to review overdue accounts and record next steps.
Learner support	Time from signal to staff review; professional judgement retained.

COSTS TO AGREE

An itemised quote separates setup and onboarding from monthly or annual hosting, maintenance and support. Payment, messaging and AI providers may carry separate charges. Confirm allowances and charges before commitment.

RESPONSIBILITIES BEFORE LIVE DATA

Agree school and provider responsibilities for authorised access, data handling, storage, backups, recovery, export, training and support. The separate school installation model is an intended delivery approach, not a certification.

Requirements to confirm: SA-SAMS data exchange requires separate scoping and verification. Test curriculum/report configuration, low-data and mobile use, language needs and family access before rollout. No government endorsement or measured pilot outcomes are claimed.

THE REVIEW REQUEST

**Arrange a technical review
and discuss a pilot school.**
